### FC/S 1.1

Fan Coil-Regler, REG  
 Fan Coil Controller  
 Régulateur de ventilo-convecteurs  
 Fan Coil-regelaar  
 Regolatore Fan Coil  
 Regulador Fan Coil  
 Fläktkonvektorregulatorn

#### ABB i-bus® EIB

GH Q630 7087 P0001

# ABB

**ABB** **FC/S 1.1**

- Geräte-Anschluss**
- ① Stromversorgung 230 V AC J1
- ② Kühlventil J2
- ③ Heizventil J3
- ④ Ventilator (3-stufig) J4
- ⑤ EIB/ KNX J5
- ⑥ Binäreingang 24 V AC J6
- ⑦ Binäreingang 24 V AC J7
- ⑧ Eingang Temperatursensor J8
- ⑨ Hilfsspannung 24 V AC für Binäreingänge J9
- ⑩ Test-Taste
- ⑪ Programmier­tas­te
- ⑫ Programmier-LED/ Test-LED
- ⑬ Test-Tabelle

**ABB** **FC/S 1.1**

**Geräte-Beschreibung**  
 Der Fan Coil-Regler steuert motorische und thermische Heizungs- und Lüftungsventile sowie mehrstufige Ventilatoren über ABB i-bus EIB oder als Einzelgerät in Kombination mit dem Temperatursensor TS/K □.□. Es stehen zwei Binäreingänge für 24 V AC-Meldekontakte zur Verfügung. Der Fan Coil-Regler benötigt eine 230 V AC-Stromversorgung. Die 24 V AC-Hilfsspannung für Binäreingänge wird vom Gerät zur Verfügung gestellt.

<b>Technische Daten</b>	
Stromversorgung	230 V AC +/- 10%, 50/ 60 Hz
Heizventil/ Kühlventil	2 Halbleiterschalter, Nennspannung: 24 V AC, Nennstrom: 250 mA, max. Dauerlast: 5 W (ohmsch), Leitungslänge: max. 20 m
Ventilator-Ausgang	3 potenzialfreie Kontakte, Nennspannung: 230 V AC Nennstrom: 6 A
Binäreingänge	2 Binäreingänge 24 V AC, Leitungslänge: 30 m

\* siehe ABB-Produktkatalog

\* siehe ABB-Produktkatalog

<b>Technical data</b>	
Power supply	230 V AC +/- 10%, 50/ 60 Hz
Heating valve/ cooling valve	2 semiconductor switches, rated voltage: 24 V AC, rated current: 250 mA, max. steady load: 5 W (Ohmic), cable length: max. 20 m
Fan output	3 potential-free contacts, rated voltage: 230 V AC, rated current: 6 A
Binary inputs	2 binary inputs 24 V AC, cable length: 30 m

\* See ABB Product Catalogue

<b>Description de l'appareil</b>	
Le régulateur de ventilo-convecteurs commande les vannes motorisées et thermiques de chauffage et d'aération, ainsi que les ventilateurs à plusieurs niveaux par l'ABB i-bus EIB, ou en tant qu'appareil à part entière en combinaison avec la sonde de température TS/K □.□. Deux entrées binaires sont disponibles pour les contacts de signalisation 24 V AC. Le régulateur de ventilo-convecteurs nécessite une alimentation en tension de 230 V AC. La tension auxiliaire de 24 V AC pour les entrées binaires est produite par l'appareil.	
<b>Caractéristiques techniques</b>	
Alimentation en tension 230 V AC +/-10%, 50/60 Hz	
Vanne de chauffage/ refroidissement	2 commutateurs, tension nominale <span> </span> : 24 V AC, courant nominal <span> </span> : 250 mA, charge max. <span> </span> : 5 W (ohm), longueur du câble <span> </span> : max. 20 m
Sortie ventilateur	3 contacts sans potentiel, tension nominale: 230, V AC, courant nominal: 6 A
Entrées binaires	2 entrées binaires 24 V AC, longueur du câble <span> </span> : 30 m

<b>Fonctions de test</b>	
Les fonctions de test peuvent également être effectuées sans programme. En appuyant sur la touche de test pendant 4 sec., l'appareil se met en mode de test (étape de test 1). En appuyant plusieurs fois sur cette touche, 8 étapes de test sont effectuées puis l'appareil revient à nouveau en mode de fonctionnement normal. Si la touche de test n'est pas actionnée pendant env. 1 min., le régulateur de ventilo-convecteurs revient automatiquement en mode de fonctionnement normal. La LED de test affiche l'état à chaque étape du test.	
<b>Étape 1 du test: EIB/ KNX</b>	LED éteinte: EIB/KNX ok. La LED clignote à intervalles rapprochés: EIB/KNX non ok.
<b>Étapes 2 à 4 du test<span> </span>: Ventilateur</b>	À chaque pression de la touche, un niveau du ventilateur est atteint, c'est-à-dire que la LED clignote rapidement 1 fois (niveau 1 du ventilateur), 2 ou 3 fois (niveaux 2 et 3 du ventilateur).
<b>Étapes 5 à 6 du test<span> </span>: Vanne de chauffage</b>	En continuant d'appuyer sur la touche, la vanne de chauffage s'ouvre (4 clignotements) ou se ferme (5 clignotements).
<b>Étapes 7 à 8 du test<span> </span>: Vanne de refroidissement</b>	En continuant d'appuyer sur la touche, la vanne de refroidissement s'ouvre (6 clignotements) ou se ferme (7 clignotements).
