	Support for custom NTC probes.	4, 8

1 INTRODUCTION

1.1 RailQUAD 8

RailQUAD 8 is an analogue / digital input module from **Zennio** featuring eight separate inputs, each configurable as:

- **Binary Input.**
- **Temperature probe**, either models provided by Zennio or other NTC temperature probes from other suppliers, being in that case possible to configure their parameters in ETS.
- **Motion detector.**

Moreover, RailQUAD 8 implements **eight independent thermostats**, which can be enabled and configured separately.

In sum, RailQUAD 8 is an updated version of the popular QUAD from Zennio, with twice the number of inputs and intended to be installed on a DIN rail

1.2 INSTALLATION

RailQUAD 8 is connected to the KNX bus through the incorporated terminal connector.

Once powered through the KNX bus, the device may be downloaded both, an individual address or the application program.

This device does not need any additional external power since it is entirely powered through the KNX bus.

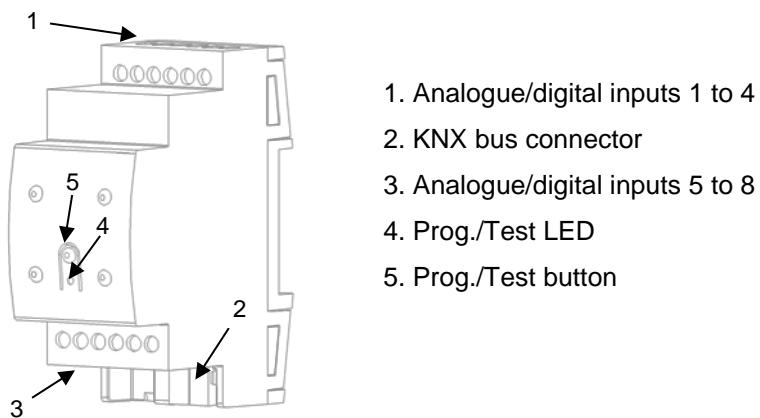

Figure 1 RailQUAD 8. Element diagram.

The main elements are described next:

- **Prog./Test Pushbutton (5):** a short press on this button sets the device into the programming mode, making the associated LED (4) light in red.

Note: if this button is held while plugging the device into the KNX bus, the device will enter into **safe mode**. In such case, the LED will blink in red every 0.5 seconds.

- **Inputs (1)(3):** input ports for the insertion of the stripped cables of external elements such as switches / motion detectors / temperature probes, etc. One of the two cables of each element needs to be connected to one of the slots labelled "1" to "8", while the other cable should be connected to the slot labelled as "C". Note that all the external input devices share the "C" slot for

one of the two cables. Please secure the connection by means of the on-board screws.

To obtain further information about the technical features of RailQUAD 8 and on security and installation procedures, please refer to the **Datasheet** of the device, bundled with the original packaging and also available at the Zennio website, <http://www.zennio.com>.

2 CONFIGURATION

2.1 GENERAL

After importing the corresponding database in ETS and adding the device into the topology of the desired project, the configuration process begins by right-clicking into the device and selecting *Edit parameters*.

ETS PARAMETERISATION

The only parameterisable screen available by default is General. From this screen it is possible to activate/deactivate all the required functionality.

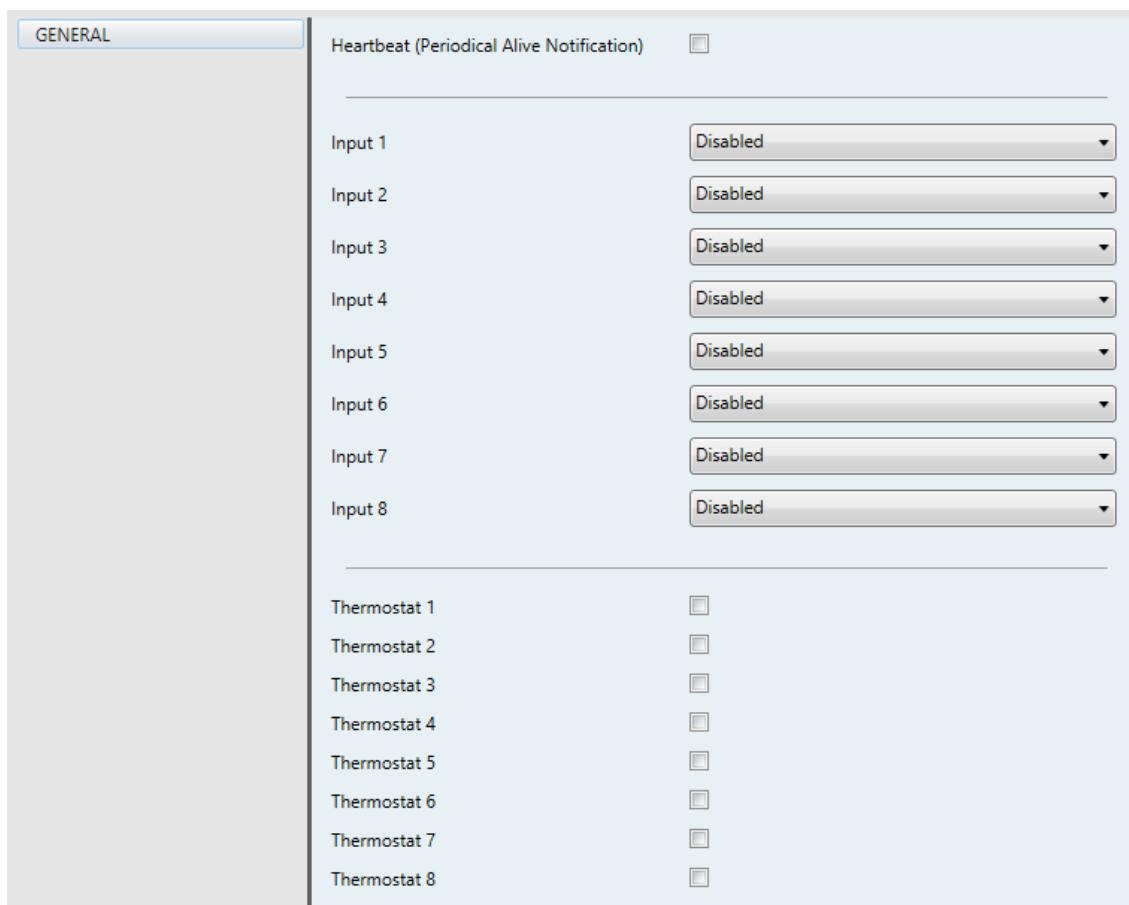

Figure 2 General.

- **Heartbeat (Periodical Alive Notification):** enables the “[Heartbeat] Object to Send ‘1’” one-bit object, which will be sent with a value of “1” and a

configurable period to notify that the device is still working (still alive).

- **Input x:** sets the type of input number “x”: “Binary Input”, “Temperature Probe” or “Motion Detector”. If such input is not required, it can be left as “Disabled”.
- **Thermostat x:** enables or disables thermostat number “x”.

One entry per input or thermostat will be included into the tab tree on the left.

2.2 INPUTS

RailQUAD 8 incorporates **eight analogue/digital inputs**, each configurable as a:

- **Binary input**, for the connection of a pushbutton or a switch/sensor.
- **Temperature probe**, to connect a temperature sensor, either models ZN1AC-NTC68 S/E/F and SQ-AmbienT from Zennio or NTC probes from third parties (the latter requires configuring their parameters in ETS).
- **Motion detector**, to connect a motion detector (models ZN1IO-DETEC-P and ZN1IO-DETEC-X from Zennio).

Important: *older models of the Zennio motion detector (e.g., ZN1IO-DETEC and ZN1IO-DETEC-N) will not work properly with this device*

2.2.1 BINARY INPUT

Please refer to the specific user manual “**Binary Inputs**”, available in the RailQUAD 8 product section at the Zennio website, <http://www.zennio.com>.

2.2.2 TEMPERATURE PROBE

Please refer to the specific user manual “**Temperature Probe**”, available in the RailQUAD 8 product section at the Zennio website, <http://www.zennio.com>.

2.2.3 MOTION DETECTOR

It is possible to connect motion detectors (models **ZN1IO-DETEC-P** and **ZN1IO-DETEC-X** from Zennio) to the input ports of RailQUAD 8. This brings the device with the possibility of monitoring motion and presence in the room, as well as the light level. Depending on the detection, different response actions can be parameterised.

Please refer to the “**Motion Detector**” user manual, available under the RailQUAD 8 product section at the Zennio website (www.zennio.com), for detailed information about the functionality and the configuration of the related parameters.

Notes:

- *The ZN1IO-DETEC-P motion detector is compatible with a variety of Zennio devices. However, depending on the device it is actually being connected to, the functionality may differ slightly. Therefore, please refer specifically to the aforementioned user manual.*
- *Motion detectors with references ZN1IO-DETEC and ZN1IO-DETEC-N are not compatible with RailQUAD 8 (may report inaccurate measurements if connected to this device).*
- *When connected to RailQUAD 8, the rear micro-switch of model ZN1IO-DETEC-P should be set to position “**Type B**”.*

2.3 THERMOSTATS

RailQUAD 8 allows independently enabling and configuring **up to eight thermostat** functions, with independence of the number of the inputs that have been configured.

Please refer to the specific “**Zennio Thermostat**” user manual available under the RailQUAD 8 product section at the Zennio homepage (www.zennio.com) for detailed information about the functionality and the configuration of the related parameters.

ANNEX I. COMMUNICATION OBJECTS

- “Functional range” shows the values that, with independence of any other values permitted by the bus according to the object size, may be of any use or have a particular meaning because of the specifications or restrictions from both the KNX standard or the application program itself.

Number	Size	I/O	Flags	Data type (DPT)	Functional Range	Name	Function
1	1 Byte	I	C - - W -	DPT_SceneControl	0-63; 128-191	[Heartbeat] Object to Send '1'	Sending of '1' Periodically
2	1 Byte	I	C - - W -	DPT_SceneControl	0-63; 128-191	[Thermostat] Scene Input	Scene Value
3, 33, 63, 93, 123, 153, 183, 213	2 Bytes	I	C - - W -	DPT_Value_Temp	-273,00 - 670760,00	[Tx] Temperature Source 1	External Sensor Temperature
4, 34, 64, 94, 124, 154, 184, 214	2 Bytes	I	C - - W -	DPT_Value_Temp	-273,00 - 670760,00	[Tx] Temperature Source 2	External Sensor Temperature

328, 357, 386, 415, 444, 473, 502, 531	1 Byte	O	C T R --	DPT_Scaling	0% - 100%	[Ix] Presence State (Scaling)	0-100%
329, 358, 387, 416, 445, 474, 503, 532	1 Byte	O	C T R --	DPT_HVACMode	1=Comfort 2=Standby 3=Economy 4=Building Protection	[Ix] Presence State (HVAC)	Auto, Comfort, Standby, Economy, Building Protection
330, 359, 388, 417, 446, 475, 504, 533 331, 360, 389, 418, 447, 476, 505, 534	1 Bit	O	C T R --	DPT_Occupancy	0/1	[Ix] Presence State (Binary)	Binary Value
	1 Bit	O	C T R --	DPT_Trigger	0/1	[Ix] Presence: Slave Output	1 = Motion Detected
332, 361, 390, 419, 448, 477, 506, 535	1 Bit	I	C -- W -	DPT_Window_Door	0/1	[Ix] Presence Trigger	Binary Value to Trigger the Presence Detection
333, 362, 391, 420, 449, 478, 507, 536	1 Bit	I	C -- W -	DPT_Trigger	0/1	[Ix] Presence: Slave Input	0 = Nothing; 1 = Detection from slave device
334, 363, 392, 421, 450, 479, 508, 537	2 Bytes	I	C -- W -	DPT_TimePeriodSec	0-65535	[Ix] Presence: Waiting Time	0-65535 s.
335, 364, 393, 422, 451, 480, 509, 538	2 Bytes	I	C -- W -	DPT_TimePeriodSec	0-65535	[Ix] Presence: Listening Time	1-65535 s.
336, 365, 394, 423, 452, 481, 510, 539	1 Bit	I	C -- W -	DPT_Switch	0/1	[Ix] Presence: Enable	According to parameters
337, 366, 395, 424, 453, 482, 511, 540	1 Bit	I	C -- W -	DPT_Switch	0/1	[Ix] Presence: Day/Night	According to parameters
338, 343, 348, 367, 372, 377, 396, 401, 406, 425, 430, 435, 454, 459, 464, 483, 488, 493, 512, 517, 522, 541, 546, 551	1 Bit	O	C T R --	DPT_Occupancy	0/1	[Ix] Presence: Occupancy State	0 = Not Occupied; 1 = Occupied
338, 367, 396, 425, 454, 483, 512, 541	1 Bit	I	C -- W -	DPT_Trigger	0/1	[Ix] External Motion Detection	0 = Nothing; 1 = Motion detected by an external sensor
339, 344, 349, 368, 373, 378, 397, 402, 407, 426, 431, 436, 455, 460, 465, 484, 489, 494, 513, 518, 523, 542, 547, 552	1 Byte	O	C T R --	DPT_Scaling	0% - 100%	[Ix] [Cy] Detection State (Scaling)	0-100%
340, 345, 350, 369, 374, 379, 398, 403, 408, 427, 432, 437, 456, 461, 466, 485, 490, 495, 514, 519,	1 Byte	O	C T R --	DPT_HVACMode	1=Comfort 2=Standby 3=Economy 4=Building Protection	[Ix] [Cy] Detection State (HVAC)	Auto, Comfort, Standby, Economy, Building Protection

524, 543, 548, 553							
341, 346, 351, 370, 375, 380, 399, 404, 409, 428, 433, 438, 457, 462, 467, 486, 491, 496, 515, 520, 525, 544, 549, 554	1 Bit	O	C T R --	DPT_Switch	0/1	[Ix] [Cy] Detection State (Binary)	Binary Value
342, 347, 352, 371, 376, 381, 400, 405, 410, 429, 434, 439, 458, 463, 468, 487, 492, 497, 516, 521, 526, 545, 550, 555	1 Bit	I	C - - W -	DPT_Switch	0/1	[Ix] [Cy] Enable Channel	According to parameters
343, 348, 353, 372, 377, 382, 401, 406, 411, 430, 435, 440, 459, 464, 469, 488, 493, 498, 517, 522, 527, 546, 551, 556	1 Bit	I	C - - W -	DPT_Switch	0/1	[Ix] [Cy] Force State	0 = No Detection; 1 = Detection
