Switch Actuator

Switch Actuator SA/S 8.16.2.2

The Switch Actuator is a modular installation device in pro*M* design. The device is designed for installation in electrical distribution boards and small housings for rapid mounting on a 35-mm mounting rail (to EN 60715).

The device possesses mutually independent switching relays with which the following functions can be implemented:

- Switching electric consumers (alternating or three-phase current)

The device is provided with bus voltage via the bus (ABB i-bus® KNX). The connection to the bus (ABB i-bus® KNX) is implemented using the bus connection terminal. The consumers are connected at the outputs using screw terminals (terminal designation on the housing).

The outputs can be switched manually using toggle switches.
