# ABB i-bus ${ }^{\circledR}$ EIB / KNX <br> Switch/Dim Actuators SD/S x.16.1 <br> 2CDG 110079 R0011, 2CDG 110080 R0011, 2CDG 110081 R0011 

The ABB i-bus ${ }^{\circledR}$ Switch/Dim Actuators with a rated current of 16 A are EIB / KNX modular installation devices in ProM design for installation in the distribution board on 35 mm mounting rails. The connection to the ABB i-bus ${ }^{\circledR}$ is implemented via a bus connection terminal.
The SD/S controls via 2-, 4- or 8 -channel dimmable electronic ballast devices or transformers with $1-10 \mathrm{~V}$ control interfaces.
Per channel the load relay can be manually operated (on/off) via operating element which simultaneously indicates the switch status.

The switching relays are particularly suitable for switching ohmic loads, inductive and capacitive loads as well as fluorescent lamp loads (AX) to EN 60669 .
The switching relays can be switched on or off manually without a bus or auxiliary voltage. The operating element simultaneously indicates the switch status.
The devices are powered via the EIB / KNX and do not require and additional power supply.

## Technical data

| Power supply | - Operating voltage <br> - Current consumption EIB / KNX | $21 . .30 \mathrm{~V}$ DC, made available by the bus |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 2.16.1 | 4.16.1 | 8.16.1 |
|  |  | 8.5 mA | 9 mA | 9.5 mA maximum |
|  | - Power consumption via EIB / KNX | Max. 25 |  |  |
| Outputs control circuit | - SD/S-type | 2.16.1 | 4.16.1 | 8.16.1 |
|  | - Number of control outpute 1-10 V (passive) | 2 | 4 | 8 |
|  | - Max. current per control output | 100 mA | 100 mA | 100 mA |
|  | - Max. number of ballast devices (2 mA/ballast) ${ }^{3}$ | 50 | 50 | 50 |

| Outputs load circuit rated values | - SD/S-type <br> - Number of load outputs (floating) <br> - $U_{n}$ rated voltage <br> - $I_{n}$ rated current <br> - Power loss per device at max. load | $\begin{aligned} & 2.16 .1 \\ & 2 \\ & 250 / 2 \\ & 16 \mathrm{~A}- \\ & 2.6 \mathrm{~W} \end{aligned}$ | 4.16.1 <br> 4 <br> AC (50/ <br> or 10 A <br> 5.2 W | $\begin{aligned} & 8.16 .1 \\ & 8^{8} \\ & \text { z) } \\ & 10.4 \mathrm{~W} \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
| Load circuit (relay) switching currents | - AC1 operation $(\cos \varphi=0.8)$ IEC 60947-4-1 <br> - Fluorescent lighting load AX acc. EN 60669-1 <br> - Minimum switching performance <br> - DC current switching capacity (ohmic load) <br> - Lamp loads | $\begin{aligned} & 16 \mathrm{~A} / 230 \mathrm{~V} \\ & \left.10 \mathrm{AX} / 250 \mathrm{~V}(140 \mu \mathrm{~F})^{2}\right) \\ & 100 \mathrm{~mA} / 12 \mathrm{~V} \\ & 100 \mathrm{~mA} / 24 \mathrm{~V} \\ & 10 \mathrm{~A} / 24 \mathrm{~V}= \\ & \text { See table } 2 \end{aligned}$ |  |  |
| Load circuit (relay) service life | - mechanical endurance <br> - electrical endurance to IEC 60947-4-1 <br> - AC1 (240 V/cos $\varphi=0.8$ ) <br> - AC5a ( $240 \mathrm{~V} / \cos \varphi=0.45$ ) | $\begin{aligned} & >3 x \\ & >10^{5} \\ & >3 x \end{aligned}$ |  |  |
| Load circuit (relays) switching times ${ }^{10}$ | - Max. relay position change per output and minute if all relays are switched simultaneously object. The position changes should be distributed over a minute. <br> - Max. relay position change per output and minute if only one relay is switched | 2.16.1 <br> 60 <br> 120 | $4.16 .1$ <br> 30 $120$ | $\begin{aligned} & 8.16 .1 \\ & 15 \\ & \\ & 120 \end{aligned}$ |

1) The specifications apply only after the bus voltage has been applied to the device for at least 30 seconds.

The typical elementary delay of the relay is approx. 20 ms
2) The maximum inrush-current peak (see table 3) may not be exceeded
3) The control current of $1-10 \mathrm{~V}$ devices determine the number of connectable ballast devices. Typical devices are between $0.4 \ldots 4 \mathrm{~mA}$.

Table 1 - Part 2: Switch/Dim Actuators SD/S x.16.1, technical data

Note: $\quad$ Connection of 230 mains voltage to one of the $1-10 \mathrm{~V}$ outputs leads to the destruction of the $1-10 \mathrm{~V}$ output.

## Note:

## Note:

Control, load and EIB / KNX sides are electrically isolated. Individual switching outputs are floating outputs. When connecting the control line it is important to consider that the control outputs each feature a common reference ground with one another.

Several electronic ballast devices with $1-10 \mathrm{~V}$ interfaces can be controlled with a channel of the Switch/Dim Actuators. The number of dimmable ballast devices per channel is limited both by the switching and the control powers of the Switch/Dim Actuator. See description in the product manual.

Table 3: User programs SD/S x.16.1

## Note:

The programming requires EIB Software Tool ETS2 V1.3 or higher.
If ETS3 is used a ".VD3" or higher type file must be imported.
The application program is in the ETS2 / ETS3 at ABB / Lighting / Switching/
Dimming Actuators 1-10 V / Switch Dim xf 1-10 V/1
( $x=$ number of outputs 2,4 or 8 )

Note: \begin{tabular}{l}
The devices do not support the closing function of a project or the KNX devices <br>
in the ETS. If you inhibit access to all devices of the project with a "BA password" <br>
(ETS2) or "BCU code" (ETS3), it has no effect on this device. <br>
Data can still be read and programmed. <br>
<br>

| See the product manual "Switch/Dim Actuators SD/S" |
| :--- |
| for a detailed description of the application program. |
| The manual is available free of charge on the Internet at www.abb.de/eib. |
