

SK08-WAQ Water Quality - pH - ORP (Redox Potential)

KNX Sensor Water Quality - pH - ORP (Redox Potential), SK08-WAQ

The KNX Sensor Water Quality SK08-WAQ is a sensor/controller from the series S8 used for recording and controlling water parameters: ph-value, redox potential and water temperature. The sensor/controller has two high impedance BNC inputs for connecting a single-rod measuring cell for pH value and redox potential. The inputs are galvanically separated from the KNX bus so that no ground loop can occur. The SK08-WAQ has an integrated KNX bus coupler and does not require additional voltage. The transducer with the bus coupler is enclosed in a durable, sealed, glass ball-reinforced plastic casing which fulfills protection degree IP65. Additionally two inputs for dry contacts are available.

Arcus-EDS offers a set of electrodes from the manufacturer Hanna; electrodes of all other makes and applications may also be used.

In the application software there are several controllers (two-position or PI controller with continuous or pulsed output) for measuring the pH value and redox potential. Additional functions include the display of upper and lower thresholds and switching between the set point and threshold.

SK08-WAQ
Water Quality Controller/Sensor with pH
Value und ORP Recording
(Single-Rod Measuring Cell included)

The sensor records the time period from the last calibration and can be used as an alarm function should the threshold be exceeded. The sensor is calibrated via the KNX bus using two calibration functions. In general, the pH-value probe is set up as a two-position calibration and the redox potential as a one-position calibration.

The sensor is configured with ETS (KNX Tool Software) and the application program. Controlling functions such as signal threshold and other adjustments are parameterized using ETS (KNX Tool Software).

Application:

- Aquariums, Swimming Pools, Ponds, Service Water Systems

Areas of Application:

- Monitoring the water quality in aquariums, swimming pools, ponds and service water systems
- Controlling sanitizing systems

Applicable Sensors: Single-rod measuring cell for pH value and redox potential Measuring Amplifier: From KNX bus, isolated high-impedance (> 500 $G\Omega$) inputs with shared 0-potential.

BNC bayonet coupler.

Entrance area pH: -600 .. 600 mV

Entrance area ORP/redox potential: -1200 .. 1200 mV

Use:

Electronic measuring equipment for flat surfaces, orientation of electrode connectors on bottom

Electrodes according to manufacturer's specifications

Ambient temperature transducer: -20 ... +80°C Ambient temperature electrodes according to manufacturer's specifications

Protection System casing transducer: IP65

SK08-WAQ Water Quality - pH - ORP (Redox Potential)

Technical Data	SK08-WAQ	
Measured Data:	pH value (concentration of hydrogen ion), ORP (redox potential), Operating Time in hours	
Sending options	No sending, periodic sending, sending when change occurs	
Parameters	Periodic sending with variable cycle duration, sending when changes occurs with variable hysteresis.	
Data type pH	2-byte float, 4-byte float, 1-byte unsigned integer	
Data type ORP	2-byte float, 4-byte float, 2-byte signed integer	
Data type Temperature	2-byte float	
Data type dry contacts	1-bit	
Data type Operating Time	2-byte unsigned integer	
	.,	
Controller Modi:	Two-position controller static, two-position controller pulsed, PI controller static, PI controller pulsed (PWM)	
Parameter Two-Position Controller Static	Set point, differential gap, control direction	
Parameter Two-Position Controller Pulsed	Set point, differential gap, control direction, cycle duration, duty cycle	
Parameter PI Controller Static	Set point, reset time, proportional factor, control direction	
Parameter PI Controller PWM	Set point, reset time, proportional factor, control direction, cycle duration, minimal/maximal duty cycle	
Lock Function:	For pH and ORP controller, parameter driven release or lock	
Controller for Control Variable Output:	Switching output (1/0), 1-Bit	
	Switching output pulsed, parameter driven duty cycle and cycle duration, 1 Bit	
	Switching output pulsed, parameter driven cycle duration, duty cycle variable driven (PWM) with minimal/maximal duty cycle, $1 \ \mathrm{Bit}$	
	Control variable static, 1-byte	
Control Variable Periodic Sending	None or 10-250 seconds parameter driven	
Threshold pH:	Upper threshold, lower threshold	
Threshold ORP:	Upper threshold, lower threshold	
Threshold Temperature:	Upper threshold, lower threshold	
Threshold Operating Time:	Upper threshold	
Anniliana Caratitias all CDD and based and	Cataciat Issued thurshald owners though ald	
Auxiliary Quantities pH, ORP and temperature: Bus Power Failure	Set point, lower threshold, upper threshold Saving changed auxiliary quantities is parameter driven	
Dus Fower Failure	Saving changed auxiliary quantities is parameter driven	
	pH 7 - Zero	
Calibration:	pH X - Transconductance	
	ORP X - Transconductance	
	Operating Time - Reset	
Ambient Temperature Electronic Measuring Equipment Casing:	Storage -20+100°C, Operation -20+80°C (transducer)	
Ambient Temperature Humidity	095% rH not condensating	
Accuracy pH:	+/- 0,1 (calibrated and not compensated for temperature)	
Resolution pH:	+/- 0,01	
Accuracy ORP:	+/- 10mV (calibrated and not compensated for temperature)	
Resolution ORP:	+/- 1mV	
Operating Voltage:	EIB/KNX bus voltage 21-32V DC	
Power Consumption ca.:	240 mW (at 24V DC)	
Auxiliary Supply:	Not required

Start-up:

The KNX Sensor is set up using the ETS (KNX Tool Software) and the applicable application program. The sensor is delivered unprogrammed. All functions are programmed and parameterized with ETS. Please read the ETS instructions.

Assembly:

The Sensor SK08-WAQ is for outdoor and (moist) indoor areas. It fulfills protection class IP65. The sensor is attached to the wall with two screws.

The transducer lid is opened by loosening the screws.

The external measuring electrode (single-rod measuring cell) cable is screwed into the side of the BNC case. First attach the sensor to the wall or ceiling, then insert the KNX Bus cable into the cable gland on the side of the casing. Detach the bus clamp from the device, attach the cable and replace the clamp onto the board. After successfully programming the device, screw the cover back on.

ightarrow Be careful not to damage the electronics with tools and cable heads.

When using the external temperature sensor or the dry contacts, the cable is inserted in an additional cable gland.

For the initial set-up the sensors must be calibrated according to the application instructions. Afterwards, it is recommended to recalibrate every 3 to 6 months.

SK08-WAQ Water Quality - pH - ORP (Redox Potential)

In Case of Bus Voltage Recurrence:

All changes made using the help key for the KNX/EIB bus are saved if the device has been correctly parameterized. The controller and outputs start with the current values. The ETS parameter settings are saved.

Discharge Program and Reset Sensor:

Should the sensor crash due to a programming malfunction, the previous project can be deleted by pressing the programming button. Hold the programming button down while connecting the EIB bus clamp and wait until the programming LED display appears. This will take 5-10 seconds. Any calibrations undertaken will be lost.

Reprints, including partial reprints, can be made only with expressed permission from Arcus-EDS GmbH. This information is the best to our knowledge and is without guarantee. We reserve the right to make any technical as well as price changes at any time.

Accountability:

The selection of devices and the determination of the suitability of the devices for a specific purpose lie fully in the hands of the said buyer. For this we give no guarantee and do not accept accountability. The data in the catalogue and data sheets do not promise special properties, but instead are derived from experience and measurements. Arcus excludes responsibility for damage done on the part of the customer due to improper operation/projecting or malfunctions. On the contrary, the operator/projector has to make sure that improper operation, and projection and malfunctions do not lead to any further damage.

Safety Guidelines:

Attention! Installing and assembling electrical devices must only be done by an electronics specialist. The customer should be aware of and adhere to the safety guidelines of VDE, TÜV and the appropriate energy provider. Our guarantee does not include defects and damage caused by improper use or non-compliance of operating instructions.

Warranty:

We provide a warranty as required by law. Please contact us in case of malfunction and send the device with a full description of the fault to the address below.
