

**Push button 4gang standard
flush-mounted
751643xx**

Technical
Documentation

Product name: push button standard 4gang	
Design: flush-mounted device (uP)	
ETS search path: Push button / Push button 4gang / Push button 4gang standard	
Functional description: The push button 4gang standard is plugged onto a flush-mounted bus coupling unit (BCU) (cf. connection diagram). After a press on the key, the push button sensor will transmit software-dependent telegrams to the KNX / EIB. These may be telegrams for switching, pushbutton operation, dimming or for shutter control. It is also possible to program value transmitter functions such as dimming value transmitter or light-scene extension units. A white operation LED can serve as orientation lighting.	
Layout The diagram shows a rectangular layout of eight push button positions arranged in two columns and four rows, labeled T1 through T8. Red squares on the left and right sides of each button indicate the position of status LEDs (B). A white square at the bottom center indicates the position of the operation LED (C). Labels A and B point to the top and side LEDs respectively.	Dimensions Width: 70 mm Height: 110 mm Depth: 13 mm (without PEI)
Controls A: 4 rockers or 8 push buttons (position: left / right) B: 4 x 2 status-LED (red) C: 1 x Operation-LED (white)	
Technical Data	
Type of protection	IP 20
Safety class	III
Mark of approval	KNX / EIB
Ambient temperature:	-5 °C ... +45 °C
Storage / transport temperature	-25 °C ... +70 °C (storage above +45 °C reduces the lifetime)
Mounting position	any
Minimum distances:	none
Type of fastening	plugging onto flush-mounted BCU
KNX / EIB supply	
Voltage	21 – 32 V DC (SELV) via flush-mounted BCU
Power consumption:	typically 150 mW
Connection:	2 x 5 pole pin contact strip
External supply	---

Response to bus voltage failure Bus voltage only:	object values are deleted, LEDs extinguished
Response on return of bus voltage: Bus voltage only:	no reaction
Input:	---
Output:	---
Connection and terminals:	
	
A: push button standard 4gang B: physical external interface (PEI) C: bus coupling unit (BCU)	
Hardware remarks	
• ----

Object description				
Objects:				
<input type="checkbox"/> 0	Value / light scene	1-byte object for transmitting value telegrams of for recalling light-scenes		
Scope of functions				
<ul style="list-style-type: none"> • Function of operating LED and of status LED parameterizable • Mode of operation (value transmitter / light-scene recall with / without memory function) freely selectable • Values (1 byte) or light-scene numbers (1...8) for all keys individually parameterizable 				

Parameters		
Description:	Values:	Remarks:
 General		
Function of operating LED	OFF ON	Defines the status of the operating LED.
Function of status LEDs	OFF ON	Defines the status of the status LEDs.
Operating mode	Value transmitter Recall light-scene without storage function Recall light-scene with storage function	Defines the function of the push button sensor.
 Push buttons 1 and 2 with "Operating mode = value transmitter"		
Left push button value (0...255)	0 ... 255; 1	Defines the value transmitted when the left push button is pressed.
Right push button value (0...255)	0 ... 255; 4	Defines the value transmitted when the right push button is pressed.
 Push buttons 1 and 2 with "Operating mode = recall light-scene with / without memory function"		
Left push button Light scene (1...8)	1 ... 8; 1	Defines the value transmitted when the left push button is pressed.
Right push button Light scene (1...8)	1 ... 8; 4	Defines the value transmitted when the right push button is pressed.
 Push buttons 3 and 4 with "Operating mode = value transmitter"		
Left push button value (0...255)	0 ... 255; 1	Defines the value transmitted when the left push button is pressed.

Right push button value (0...255)	0 ... 255; 4	Defines the value transmitted when the right push button is pressed.
 Push buttons 3 and 4 with "Operating mode = recall light-scene with / without memory function"		
Left push button Light scene (1...8)	1 ... 8; 1	Defines the value transmitted when the left push button is pressed.
Right push button Light scene (1...8)	1 ... 8; 4	Defines the value transmitted when the right push button is pressed.
 Push buttons 5 and 6 with "Operating mode = value transmitter"		
Left push button value (0...255)	0 ... 255; 2	Defines the value transmitted when the left push button is pressed.
Right push button value (0...255)	0 ... 255; 5	Defines the value transmitted when the right push button is pressed.
 Push buttons 5 and 6 with "Operating mode = recall light-scene with / without memory function"		
Left push button Light scene (1...8)	1 ... 8; 2	Defines the value transmitted when the left push button is pressed.
Right push button Light scene (1...8)	1 ... 8; 5	Defines the value transmitted when the right push button is pressed.
 Push buttons 7 and 8 with "Operating mode = value transmitter"		
Left push button value (0...255)	0 ... 255; 2	Defines the value transmitted when the left push button is pressed.
Right push button value (0...255)	0 ... 255; 5	Defines the value transmitted when the right push button is pressed.
 Push buttons 7 and 8 with "Operating mode = recall light-scene with / without memory function"		
Left push button Light scene (1...8)	1 ... 8; 2	Defines the value transmitted when the left push button is pressed.
Right push button Light scene (1...8)	1 ... 8; 5	Defines the value transmitted when the right push button is pressed.

Software remarks

• Light-scene extension unit:

When a key is pressed for more than 1 s, the parameterized light-scene is recalled and the pertaining status LED switched on for about 1 s. If a key is pressed during a light-scene recall with storage function for more than 5 s, a storage telegram corresponding to the parameterized light-scene will be transmitted and the status LED is lit up for 4 s. Pressing a key with storage function for a time between 1 s and 5 s is without effect.

The status LED lights up after a key-press only in conjunction with a positive acknowledgement (IACK) from an addressed actuator.

• Value transmitter:

The status LED lights up after a key-press only in conjunction with a positive acknowledgement (IACK) from an addressed actuator.
