

## CM.1.1.1 KNX Connection Module

The KNX Connection Module enables a fast access to the twisted-pair-(TP)-KNX wires. The Connection Module is for DIN rail mounting, 2 modules wide and is connected within the distribution box with a standard KNX connection terminal to the KNX line. On a special KNX Female socket the KNX line is available at all times from outside. The new module is a cost-efficient alternative to the fixed installation of a USB- or IP-Interface. An additional available KNX Configuration Tool with accordingly connector can be connected very easy to the KNX line without any installation work. For programming or changing parameters of KNX components it's no more necessary to open the cover of the distribution box or disassembling of a push button sensor.

### Technical Data

Connenction Terminals	KNX Connection Terminal black/red KNX Connector female
Operating temperature	-5°C to +50°C
Protection Degree	IP20
Dimensions	2 Modules 35x91x62 mm (WxHxD)

### Accessoir

CM.9.1.1

KNX Connector male

CM.9.1.2

KNX Connector female
