

## KNX Gira HomeServer 4

Specification	Order No.	Packing unit	PS	EAN
 Gira HomeServer 4	0529 00	1	05	4010337529002

Gateway for KNX installation, primarily matched to the needs of buildings in the private sector. It turns the Gira HomeServer 4 into an on-board computer that assumes the networking of modern buildings and their technical equipment internally and with the outside world. Operation is carried out via state-of-the-art communication media. In addition to a PC, access is also possible via other Internet-capable devices connected to a LAN, an in-house WLAN, or the Internet. As a result, KNX functions can be controlled and regulated anywhere. The Gira SmartSensor, Control 9 Client, Control 19 Client and Gira Interface apps for the iPhone®, iPod® touch and iPad™, and Android can be used as convenient operating devices for the Gira HomeServer 4. An app for Apple® devices is available in the Apple® Store. For Android® devices, there is an app available from the Google Play Store®. Due to the software architecture, the HomeServer is protected against attacks from the Internet. The high security standard is supplemented, among other things, by an authentication system in which a telephone number, user name, and PIN are requested (only in connection with a USB-ISDN adapter).

## Features

- Can be updated.
- Management of 200 users. Multiple logins possible under one user name.
- Project archiving with individual content such as floor plans, etc.
- Cyclic/triggered data recording (for example, temperature courses, elapsed-hours meters, fill levels). Graphic display.
- Graphic user interface: Visualisation of building and device states with freely positionable icons and texts. Saving of individual images and menu structures for each user group.
- Evaluation of IP cameras, e.g. from Mobotix: Recording of images and display in visualisation. Forwarding of the image data via e-mail and FTP. In the process, country-specific requirements must be taken into account, especially protocol-specific information and standards in the communication sector (e.g. ISDN, text message, etc.).
- Exporting of data or alarm records in the Excel™, CSV, HTML or XML file formats.
- Mathematical functions (e.g. basic operations).
- Storing and calling up of light scenes.
- Time clocks, weekly program, public holiday calendar.
- Fault messages, measured values and sensor or actuator states can be transmitted by text message, push notification, and e-mail. Acknowledgement via KNX or phone.
- Switching via phone call.
- Self-teaching occupied-home simulation.
- Remote programming via network, Internet and data communications connections.
- Transmitting ASCII texts to the Info Display 2.
- IP coupling with products from other manufacturers that generate or edit IP telegrams for control.

- Low-wearing, as there are no moving parts such as a fan or hard disk.
- Graphic logic editor: Allows for example copying module groups across projects, creating any number of work sheets. Over 150 logic nodes are set up.
- Importing and exporting of global libraries.
- Communication objects: Data transfer from ETS by means of an OPC file or HSXML file (ETS add-in). Importing and exporting of communication objects as a CSV file.
- Universal time clock: Several switching points possible per clock. Use of placeholders in day, month, year. Activation/deactivation via communication object. With Astro and random function.
- Data backup/restoration of retentive data.
- 14-byte KNX texts: Evaluation through comparison with text string. Use in text messages, push notification, e-mails, or status page.
- Receipt of IP telegrams: Specification of an address range, extraction of 14-byte KNX texts, assignment to 14-byte KNX texts.
- SNMP: Reading out numeric and 14-byte KNX texts. Setting numeric values, integer values, and texts. Transmitting SNMP Traps via HomeServer command. Optional ColdStart Trap when starting HomeServer.
- Operation/status display via Agfeo telephone system.
- Bus access via KNXnet/IP protocol.
- Evaluation of web-based IP devices (reading/writing).
- iETS server: Remote programming of KNX systems (secure operation ensured). Enabling iETS function via communication object. HomeServer continues to run without restriction during programming via iETS. Switching processes continue to run. Process image remains current.

## Technical data

### Connection options

- |                |                                   |
|----------------|-----------------------------------|
| - Serial port: | 1 x RS232                         |
| - Network:     | 1 x RJ45, 10/100 Mbit Ethernet    |
| - KNX:         | via IP router, USB data interface |
| - USB:         | 2.0 type B                        |
| - ISDN:        | via USB-ISDN adapter              |

Power consumption: approx. 15 W

Ambient temperature: 0 °C to +40 °C

---

## Notes

- For further information, please see: [www.gira.de/homeserver](http://www.gira.de/homeserver).
- Technical information may vary or be modified depending on version. In the same way, the scope of service can vary among the individual clients (QuadClient, iOS app, Android app).
- Recommended system requirements for operating devices: Internet browser of possible operating devices must support at least HTML 4.0, Java Script 1.1, CSS, and Dynamic HTML.
- HomeServer Expert software for operating systems from Windows XP™ including Internet Explorer from version 6.0.
- Adoption of the ETS group addresses from ETS 2, 3, and 4.
- Integration of graphics programs.

---

## Scope of supply

- Mains cable, null modem cable, brief instructions, HomeServer 4.
