

# SRKNX

hidden movement detector

SRKNX has been designed for installing in false ceilings, making possible to control lightning or anti-intrusion functions in common zones, as corridors, bathrooms, garages, etc.

Its hidden installation protects it from undesired manipulations or vandalistic acts and also allows to be installed in special requirements areas.

SRKNX clearly exceeds, in terms of sensitivity and precision, to the optical detectors.

- Detects movement through non-metallic, solid objects (hidden installation).
- Detects every movement, even the smallest ones.
- Fully compatible with KNX standard.
- Sensitivity adjustment and programmable timings from ETS.
- It holds 6 communication objects: On/Off, Remote Activation, Intensity Value, Time Remain Value, Start of Detection Event and End of Detection Event.
- Measures: 64x25x45mm.
- Consumption: 35mA.
- Maximum area of detection to 2,5 m high: 12x6 m.
