## 1 Presentation

Intesis gateway IN485UNI001I000 provides full integration of infrared-enabled air conditioners into BACnet MS/TP networks (over EIA-485).

Compatible with most AC units equipped with an IR receiver

### Main features

- Reduced dimensions and quick installation
- Compatible with most AC brands, infrared enabled models
- Wall or desktop (surface) mounted. Reduced dimensions for easy installation.
- Direct connection to BACnet MS/TP over EIA-485 as a slave device
- Auto-learn function for quick and easy setup of IR remote control
- Mini USB port for connection to config software. It is also used for power supply
- Power adapter included (EU, UK, USA and AU plugs supplied).
- Simultaneous control of the AC unit both from BACnet and from IR remote controller.

### 1.1 BACnet MS/TP integration

This document describes the integration of IR-enabled air conditioning systems into BACnet MS/TP networks using gateway IN485UNI001I000.

The aim of this integration is to monitor and control your air conditioning system, remotely, from a BACnet enabled control system. To do so, Intesis allows BACnet communication allowing polling or subscription requests (COV).

Abstraction of the air conditioning system properties and functionalities as fixed BACnet Objects. Intesis allows fixed BACnet object IDs mapping. Simple configuration is needed: just select the appropriate communication parameters (MAC address, baud rate...).

This document assumes that the user is familiar with BACnet and Dakin technologies and their technical terms.

## 1.2 Functionality

Intesis gateway keeps updated status of all objects in its memory, ready to be served when requested from the BACnet side. Intesis links the AC unit elements to BACnet objects. The AC unit can be controlled simultaneously from both the IR remote (if present) and from the BACnet system.

## 1.3 Capacity of Intesis

Intesis is capable of integrate one single Daikin AC unit and its associated elements.

Element	Max.	Notes
Number of indoor units	1	Number of indoor units that can be controlled through Intesis
Number of Objects	34	Number of AC signals available as objects into Intesis.

## 1.4 Quick Setup

1. Connect the interface via mini USB to the PC (cable not included, Mini-USB Type Mini B)
2. Configure your device using Intesis MAPS configuration software (Check Intesis MAPS User Manual for detailed description).
3. Install the interface in proximity of the AC indoor unit and connect it to the power supply. Check the interface location that best fits the installation (More at chapter 6). Use parrot mode to verify the device location.
4. Connect RS485 to BACnet network.

### IMPORTANT: Power supply

The interface is USB-powered. If not connected to a computer for setting or testing routines from the Config Tool, the USB port should be feeding 5 Volts DC from the power adapter (included)

## 2 BACnet Protocol Implementation Conformance Statement (PICS)

**Date:** 2015-04-01

**Vendor Name:** HMS Industrial Networks S.L.U

**Product Name:** IN485UNI001I000

**Product Model Number:** IN485UNI001I000

**Application Software Version:** 1.0

**Firmware Revision:** 1.0.0.0

**BACnet Protocol Revision:** 12

### Product Description:

*Universal IR air conditioning system – BACnet MS/TP*

Abstraction of air conditioning units properties and functionalities as BACnet Objects.

### 2.1 BACnet Standardized Device Profile (Annex L):

- BACnet Operator Workstation (B-OWS)
- BACnet Building Controller (B-BC)
- BACnet Advanced Application Controller (B-AAC)
- BACnet Application Specific Controller (B-ASC)
- BACnet Smart Sensor (B-SS)
- BACnet Smart Actuator (B-SA)

Additional BACnet Interoperability Building Blocks Supported (Annex K):  
*Reference of BIBBs List*

### 2.2 Segmentation Capability:

Segmented request supported  No  Yes Window Size 16 :  
Segmented responses supported  No  Yes Window Size 16 :

### 2.3 Data Link Layer Options:

- BACnet IP, (Annex J)
- BACnet IP, (Annex J), Foreign Device
- ISO 8802-3, Ethernet (Clause 7)
- ANSI/ATA 878.1, 2.5 Mb. ARCNET (Clause 8)
- ANSI/ATA 878.1, RS-485 ARCNET (Clause 8), baud rate(s) \_\_\_\_\_
- MS/TP master (Clause 9), baud rate(s): 9600, 19200, 38400, 76800
- MS/TP slave (Clause 9), baud rate(s):
- Point-To-Point, EIA 232 (Clause 10), baud rate(s):
- Point-To-Point, modem, (Clause 10), baud rate(s):
- LonTalk, (Clause 11), medium: \_\_\_\_\_
- Other: \_\_\_\_\_

## 2.4 Device Address Binding:

Is static device binding supported? (This is currently necessary for two-way communication with MS/TP slaves and certain other devices.)  Yes  No

## 2.5 Networking Options:

- Router, Clause 6 - List all routing configurations, e.g., ARCNET-Ethernet, Ethernet-MS/TP, etc.
- Annex H, BACnet Tunnelling Router over IP
- BACnet/IP Broadcast Management Device (BBMD)  
Does the BBMD support registrations by Foreign Devices?  Yes  No

## 2.6 Character Sets Supported

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

- ANSI X3.4
- IBM™/Microsoft™ DBCS
- JIS C 6226
- ISO 10646 (UCS-4)
- ISO 10646 (UCS-2)
- ISO 8859-1

## 2.7 Gateway

If this product is a communication gateway, describe the types of non-BACnet equipment/network(s) that the gateway supports:

*Universal IR air conditioning system – BACnet MS/TP*

<sup>3</sup> Use of Celsius or Fahrenheit units can be selected through DIP-switch configuration. See section 7.1 for more information.

## 5.3.10 FanSpeed\_status (Multistate Input Object Type)

It indicates the fan speed status of the indoor unit.

Property Identifier	Property Datatype	Value	ASHRAE	IBOX
Object_Identifier	BACnetObjectIdentifier	(Multi-state Input, 1)	R	R
Object_Name	CharacterString	"FanSpeed_status"	R	R
Object_Type	BACnetObjectType	MULTISTATE_INPUT (13)	R	R

### ResetBehaviour setting table

ResetBehaviour interpretation is possible using the value in the following correspondence table.

Present_Value	Contents displayed in State_Text
1	Send to AC unit
2	Do not send to AC unit

## 5.3.22 OnOff\_startup (Binary Value Object Type)

It indicates if the system is continuously checking the On/Off conditions.

Property Identifier	Property Datatype	Value	ASHRAE	IBOX
Object_Identifier	BACnetObjectIdentifier	(Binary Value, 4)	R	R
Object_Name	CharacterString	"OnOff_startup"	R	R
Object_Type	BACnetObjectType	BINARY_VALUE (5)	R	R

## 6 Device Installation

This Intesis device is equipped with 2 infrared (IR) emitters and 1 IR receiver. Two emitters provide extra degrees of freedom for location and position. The receiver gets feedback from the IR wireless remote controller, so the AC unit status is reported to the BACnet system.

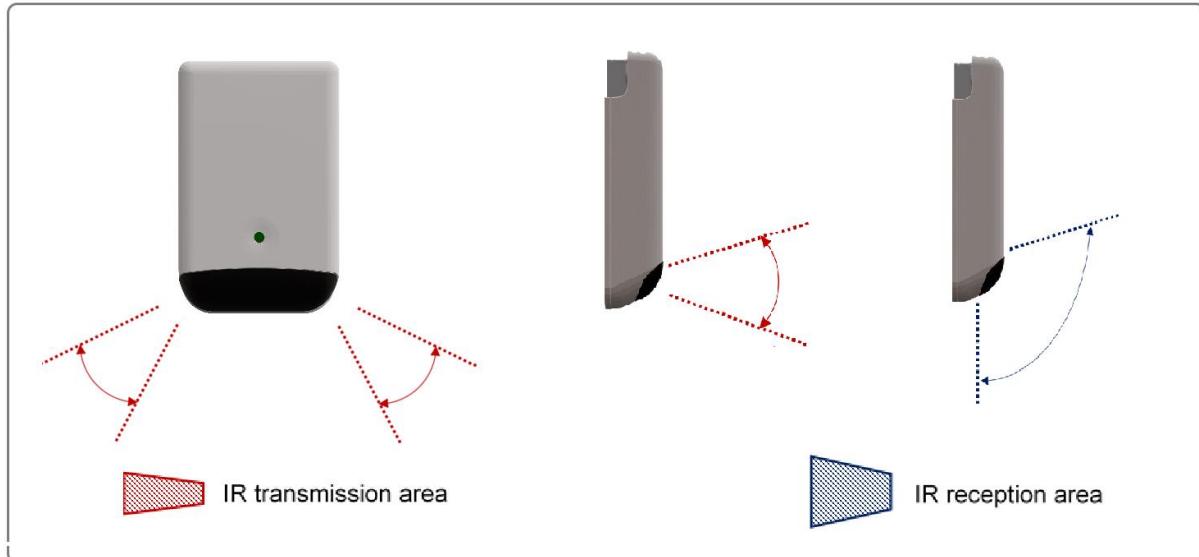

Figure 1: Built-in IR emitters and IR receiver

### 6.1 Device emplacement and IR connection

Intesis IN485UNI001I000 is intended for surface mount, either on a wall or a desktop. Different emplacements are acceptable, as shown in figures below.

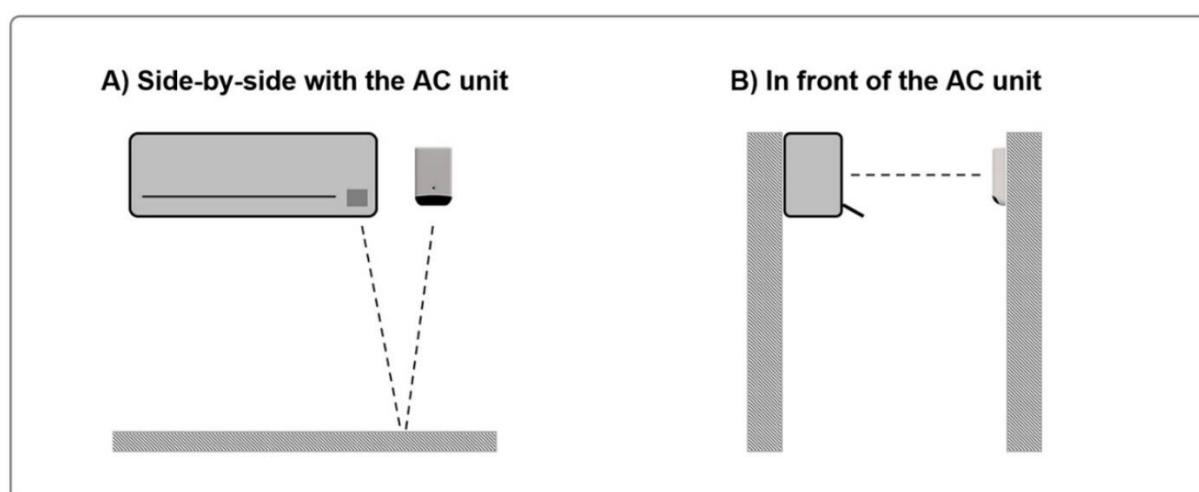

Figure 2: Wall mount possibilities

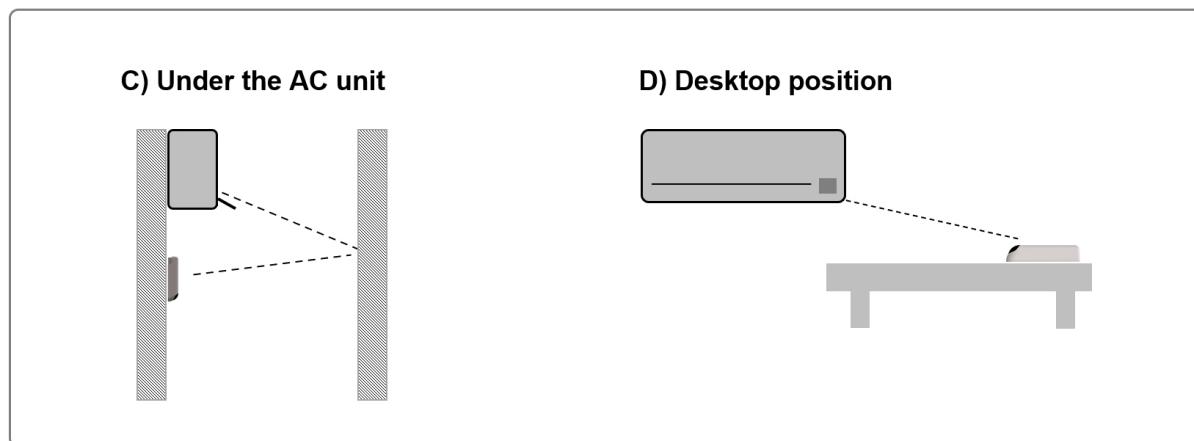

Figure 3: Wall mount and desktop mount possibilities

**Case A:** Placed side-by-side with the AC unit. The signal will travel from the Intesis device to the AC unit taking advantage of the rebounds on the floor or furniture present in the room.

**Case B:** Placed in front of the AC unit. The signal will travel from the Intesis device directly to the AC unit.

**Case C:** Below the AC unit. In this case, the signal will travel from the Intesis device to the AC unit taking advantage of the rebounds on the wall in front of it or other furniture.

**Case D:** Desktop mount. The signal will travel directly from the Intesis device to the AC unit

## 6.2 Connection to EIA-485

Notice the EIA-485 screw terminal block at the back of the device

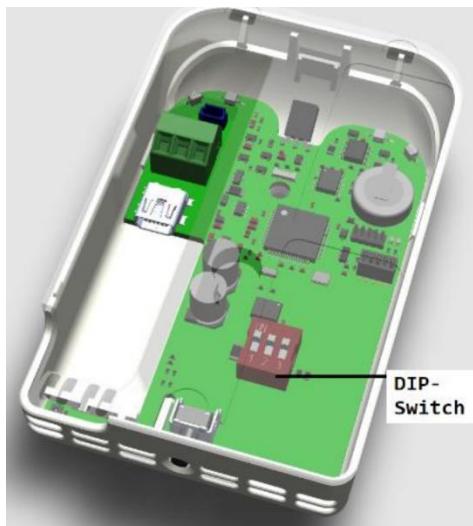

## 6.3 Mini USB port

Use the USB cable to connect the device to a computer running config software, for setting and testing purposes, or to the power adapter (included), for regular operation

## 7 Configuration settings

### 7.1 DIP-switch settings

To access the onboarded DIP-switch block, the enclosure must be opened by bending both frontal tabs (inserting a plane tool tip size <5 mm). This operation must be performed by qualified personnel only

DIP-switch	Description
ON 	EIA-485 bus without a termination resistor
ON 	Internal 120 Ω termination resistor connected to EIA-485 bus
ON 	No bus polarization
ON 	Active bus polarization

Figure 7.8 Onboarded DIP-switch block

### 7.2 Push button functionality

The device is equipped with one push button which performs two different actions:

#### Action 1: AC ON&OFF

AC ON/OFF STATUS	User action	Device action
OFF	1 click	ON+COOL+25°C
OFF	2 clicks	ON+HEAT+21°C
ON	1 or 2 clicks	OFF

When Parrot mode is active, switching ON&OFF the AC is not permitted from this button. Please, exit Parrot mode to enable AC ON&OFF.

#### Action 2: Parrot mode enable / disable

AC ON/OFF STATUS	User action	Device action
ON or OFF	3 clicks	Activate/deactivate Parrot mode

When Parrot mode is enabled, the device will simply emit every IR signal picked at by the receiver, acting as a repeater. Parrot mode is used for testing or troubleshooting to confirm the device location for AC control.

## 7.3 Device LED indicator

The device is equipped with one multicolour LED indicator. Different colours are used to report different operation modes and operation conditions, as described in following tables

### Normal operation

LED COLOR	Blink freq / steady	Device informs...
READ	STEADY	HEAT mode
BLUE	STEADY	COOL mode
BLUE	STEADY	DRY mode
YELLOW	STEADY	AUTO mode
GREEN	STEADY	FAN mode
RED	BLINK 3 times	Command received or sent during HEAT mode
BLUE	BLINK 3 times	Command received or sent during COOL mode
BLUE	BLINK 3 times	Command received or sent during DRY mode
YELLOW	BLINK 3 times	Command received or sent during AUTO mode
GREEN	BLINK 3 times	Command received or sent during FAN mode

### Parrot mode

Parrot mode is a function to find the best device location for its normal operation.

LED COLOR	Blink freq / steady	Device informs...
WHITE	0.5 s ON – 0.5 s OFF	Parrot mode ON

### Auto-learn mode

Auto learn is a function that allows to autoconfigure the native AC infrared remote controller in the IN485UNI001I000 device. This function can be enabled via Intesis Maps only, please, refer to Intesis Maps configuration manual for IN485UNI001I000 to use this function.

LED COLOR	Blink freq / steady	Device informs...
WHITE	STEADY	Device is ready to get an IR frame

### Device connected via USB

LED COLOR	Blink freq / steady	Device informs...
ORANGE	STEADY (low intensity)	USB link performed
ORANGE	STEADY (high intensity)	Intesis Maps communication
MAGENTA	0.5 s ON - 0.5 s OFF	USB communication (FW download in progress)
CYAN	1s ON - 1s OFF (x3)	FW download finished

### Error notification

LED COLOR	Blink freq / steady	Device informs...
RED	Deadly blinking	RCF corruption

Check Intesis Maps configuration manual to know how to overcome this error.

## 7.4 Intesis® MAPS Config Tool

This interface is configured using Intesis MAPS®. You can download this software for free in [www.intesis.com](https://www.intesis.com). Please, review Intesis Maps IN485UNI001I000 user manual to learn how to configure the device using this software.

### 9 List of compatible AC indoor units.

This interface is compatible with almost every AC indoor unit with IR (infrared) control. Check if your AC unit is already integrated in this [link](#).

If your AC unit or IR remote controller were not in the list, contact Intesis TS Team to confirm if the IR remote is already integrated or how to initiate the integration process.
