

DOOR STATION

Select a suitable door station model, based on the number of users (homes) to be serviced and type of camera. Different models are available featuring 1, 2, 4 or 6 direct call buttons, with and without camera. See refs. C0205x and C0106x.

INSTALLATION

- No additional parts are required for in-wall flush mounting. Optionally, flush-mount boxes (refs. C0111x) can be used to ease the installation process.
- For surface mounting, a suitable surface mounting box is required (refs. C0110x)

POWER SUPPLY

- Power is fed to the door station using PoE (Power over Ethernet). If the door station is connected to a switch/router supporting PoE 802.3af technology, then no additional parts are required.
- Otherwise, a PoE injector (8061994) should be used.

IDDERO TOUCH PANELS

Iddero HC2-KNX 7" and HC2L-KNX 10,4" touch panels can be used as indoor monitors for Robin SmartView door stations. For more information, please contact Iddero directly (iddero@iddero.com).
