

Maria walks into her house and immediately she says “turn the lights on”. It may seem she is talking to someone else but she is giving orders to her **INVOX** system. Using just her voice, Maria orders are done...

vocali

INVOX is a voice interface to control all the devices of a domotics installation without moving, just using your voice. From anywhere it is possible to control all the lights, blinds, climate, video and audio systems,... using your voice, without voice training or similar.

INVOX is plug and speak: you can use all the power of the language to control your installation.

Several applications in homes, buildings, hotels, hospitals, nursing homes, and so on. It is specially interesting for disabled people who can interact with their surroundings without moving or struggling with digital displays and visualizations.

Users can use common microphones and smartphones, PDAs,... to control their installations, even when they are out, thanks to the VoIP technology intergrated in **INVOX**.

Voice control of a KNX installation // Natural language commands: no need to memorize how to say something
// No voice training // Control all domotics devices // Improve your quality of life.

Best integration technology
KNX International Forum 2010 Award
